THE CHANGING LANDSCAPE OF CLOUD MIGRATION

Why IT organizations must be agile and able to execute change without disruption

80% of Fortune 500 Companies still have **legacy applications** running some critical functions
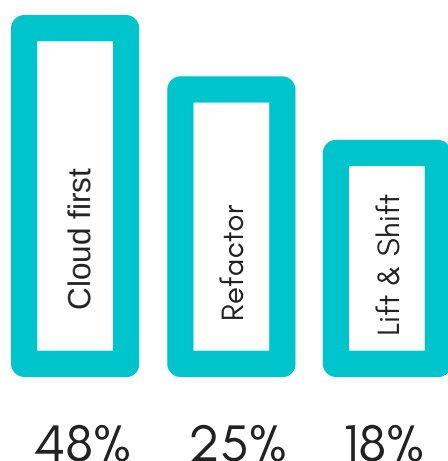

38% cite **cost reduction** as a key factor driving workloads to the cloud

52% identify governance and compliance as the most common **cloud adoption challenges**

Lift and shift losing ground to refactor

48%   Cloud-first for new applications
25%   Refactor and shift
18%   Lift and Shift for existing applications

Cloud first	Refactor	Lift & Shift
48%	25%	18%

42% say cloud migrations fail due to **lack of planning**

Keys to a Successful Cloud Migration

- Employ an application-centric view
- Map all interdependencies
- Have a move-day plan for all migration activities
- Take a dual approach to moving workloads
- Leverage table top exercises to continually improve the execution plans
