

# Jump Start Services:

## *Application Portfolio Roadmap*

*What's getting in your way?*

## Accelerate the Change

## Accelerate a Stalled Cloud Transformation Program

- **Cost savings**
- **Better availability**
- **Improved scalability**
- **Resiliency**

### Don't let anything get in your way.

The benefits of moving to the cloud are well documented, but many companies haven't gotten past go on their cloud journey. In fact, many Fortune 2000 companies are still struggling to figure out what to move, what to retire, when and how to move applications - and where. And for good reason. There are lots of complicated decisions to be made -- particularly with legacy applications.

**The good news** is that there is a powerful transformation methodology and a platform built to accelerate your journey and ensure your migration goes as planned.

TDS experts have led hundreds of successful data center and cloud migrations since we started in 2002. Many enterprise organizations trust us to help them make decisions, accelerate their migrations and ensure they go forward without disrupting the business.

We're offering a **Jump Start Service** to demonstrate the effectiveness of our expert team, proven methodology and TransitionManager platform. We will perform a rapid mapping of application and infrastructure and high-level app rationalization framework and identify which elements of your environment may slow you down, especially at scale.

Let us assess up to 20 applications and, in just **4 weeks**, perform a gap analysis to determine bottlenecks for scale, and collaborate with you on an updated, best practice process model. You'll also get plan and costing to complete a full application portfolio management project.

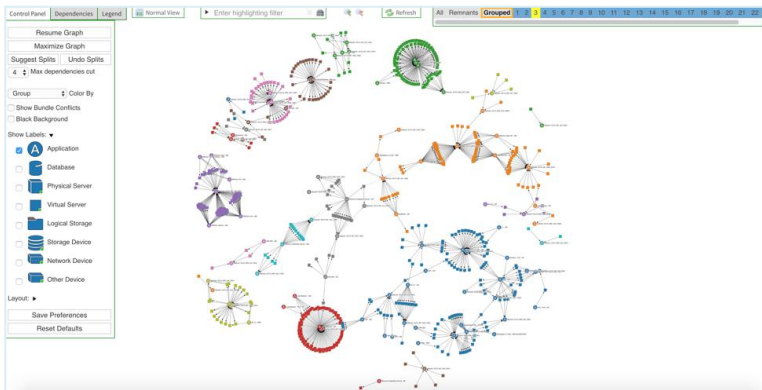

## What we'll do

**First**, the TDS team will quickly aggregate and normalize siloed data sources to provide a clear view of your application environment through the powerful TransitionManager platform. We'll conduct interviews with your application owners and infrastructure teams to review existing architectures and rationalize your applications – delivering informative application rationalization reports, tailored to address your goals and your environment.

## What you can expect

Next, we will generate outcomes and final deliverables, including:

- Learn how to identify cloud-ready applications faster
- Application rationalization reports
- Migration priorities
- Event schedule
- Dependency diagrams, build-out and cutover runbooks
- Discovery dashboards, data export, data gap analysis

Visual dependency diagrams for server, application, database and network

## The Bottom Line

The results will set you up to more rapidly assess the rest of your application environment. You'll be on your way to automate, reduce costs, and easily take advantage of the much-touted value of cloud. Your enterprise architects will be able to leverage proven practices to build dependable corporate computing environments and quickly evolve with fast moving business requirements.

There are no secrets to making decisions about your application environment – but there are proven steps we can guide you through to make it easier and faster. Let us turn things around and get you started on your cloud journey.

## Case Study: Accelerating the Cloud Journey for a Global Manufacturing Firm

TDS recently worked with a global manufacturing firm to help them migrate out of an aging datacenter that was costly to operate and had frequent service interruptions that impacted business operations.

One of the most important goals of the client's adoption of public cloud was to eliminate current data center single point of failure and compliance risks as well as adding DR capability. The manufacturer recognized that managing their own data center and hardware to host applications takes time, money and resources. There's always something that needs to be updated, replaced, or repaired, and with that upkeep comes facility, equipment and employee costs. They had also experienced frequent application outages that were impacting revenue generating business processes.

With these realities bearing down on them, the client looked to TDS and its TransitionManager software to advise them on how to efficiently and predictably migrate their applications to the cloud. TransitionManager's actionable view of the data enabled an efficient process for decision making about each application, server and database. Both business and IT worked together to score each against the company's priorities, the criticality of the app, the associated dependencies, costs, and level of effort. Using TransitionManager allowed the manufacturing firm to rationalize which applications were optimal for public cloud and which applications were more suited to the firm's other private data centers and using that to create a schedule which would balance speed, business goals, technical constraints and resource impact.
